## **ABSTRACT**

This study aimed to determine the resources and services of school clinics in higher education institutions in La Union. The descriptive method of research was used and checklist was the main data gathering tool. Frequency counts, percentages, were used to treat the data.

The salient findings of the study are as follows: (1) the extent of availability of the resources in school clinics in HEI's along personnel, equipment, and supplies are highly available. (2) the extent of availability of the services of school clinics in HEI's along dental and nursing are highly available, while medical is moderately available. (3) The strength was found out to be along personnel, while the weaknesses were along equipment, supplies and services.

The study concluded that the resources in school clinics of higher education institutions in terms of personnel, equipment, and supplies are available. The services in medical, dental and nursing services are all available. Moreover, the strengths were found to be along personnel, and weaknesses along equipment and supplies and services.

Based on the findings of the study, proposed measures will enhance the provision of resources and services in the school clinics of HEI's.
